

Supplementary Table 1. Multivariate analysis of risk factors for hepatolithiasis-related death

	Risk ratio	95% confidence interval	<i>P</i> value
Liver atrophy of affected segment(s)	10.4	1.69–64.2	0.011
Precancerous lesions †	12.7	1.36–118	0.026
Postoperative jaundice	0.294	0.0631–1.37	0.12

† Precancerous lesions include biliary intraepithelial neoplasia and intraductal papillary neoplasm of the bile duct.
