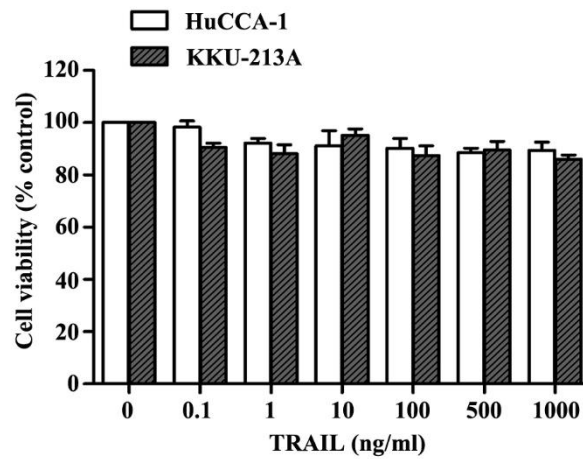

Figure S1 HuCCA-1 and KKU-213A cholangiocarcinoma cell lines are resistant to TRAIL

HuCCA-1 and KKU-213A cells were treated with various concentrations of TRAIL for 24 h and cell viability was determined by MTT assay. The results showed that HuCCA-1 and KKU-213A cell viabilities were not affected by TRAIL treatment even at a dose as high as 1000 ng/ml. This indicates that both cell lines are resistant to TRAIL.
