

Supplementary Figure 1: Modulations in lipid peroxidation (LPO) levels in the skin and liver of mice after CPSE treatment compared to control group.

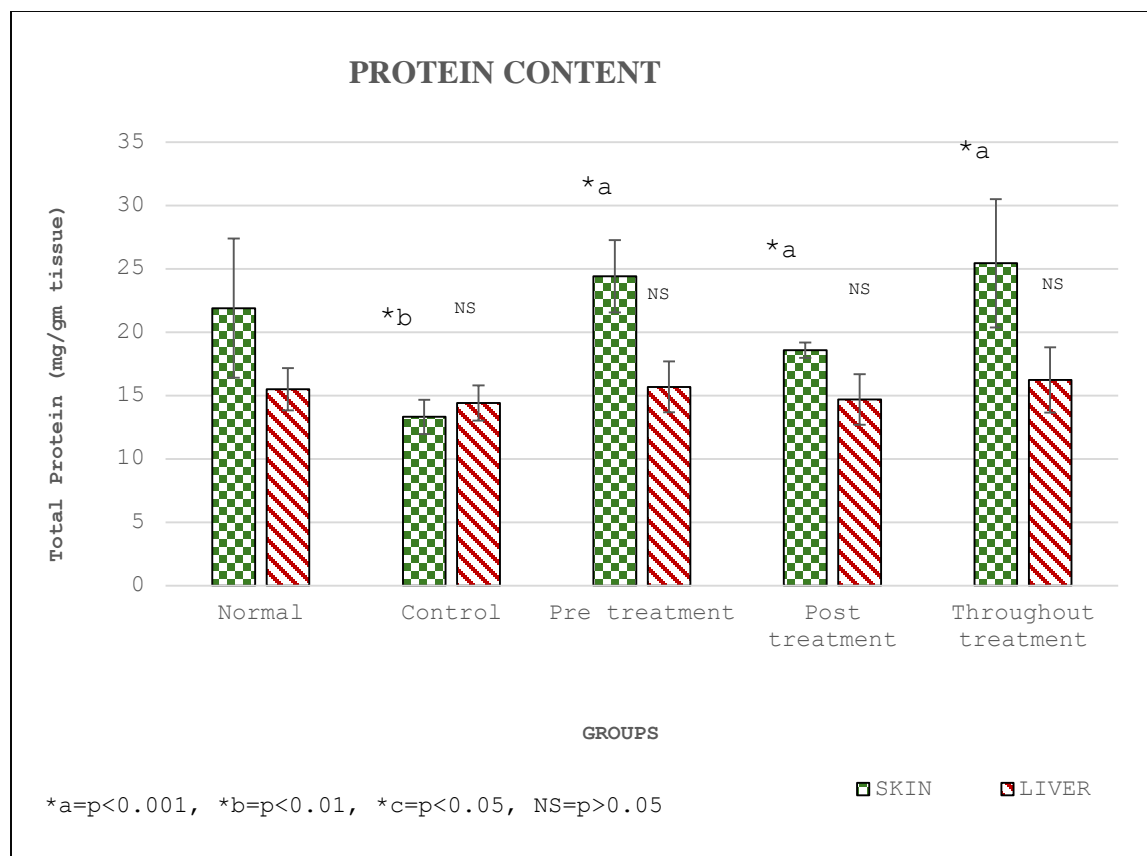

Supplementary Figure 2: Modulations in the reduced glutathione (GSH) content in the skin and liver of mice after CPSE treatment compared to control group.

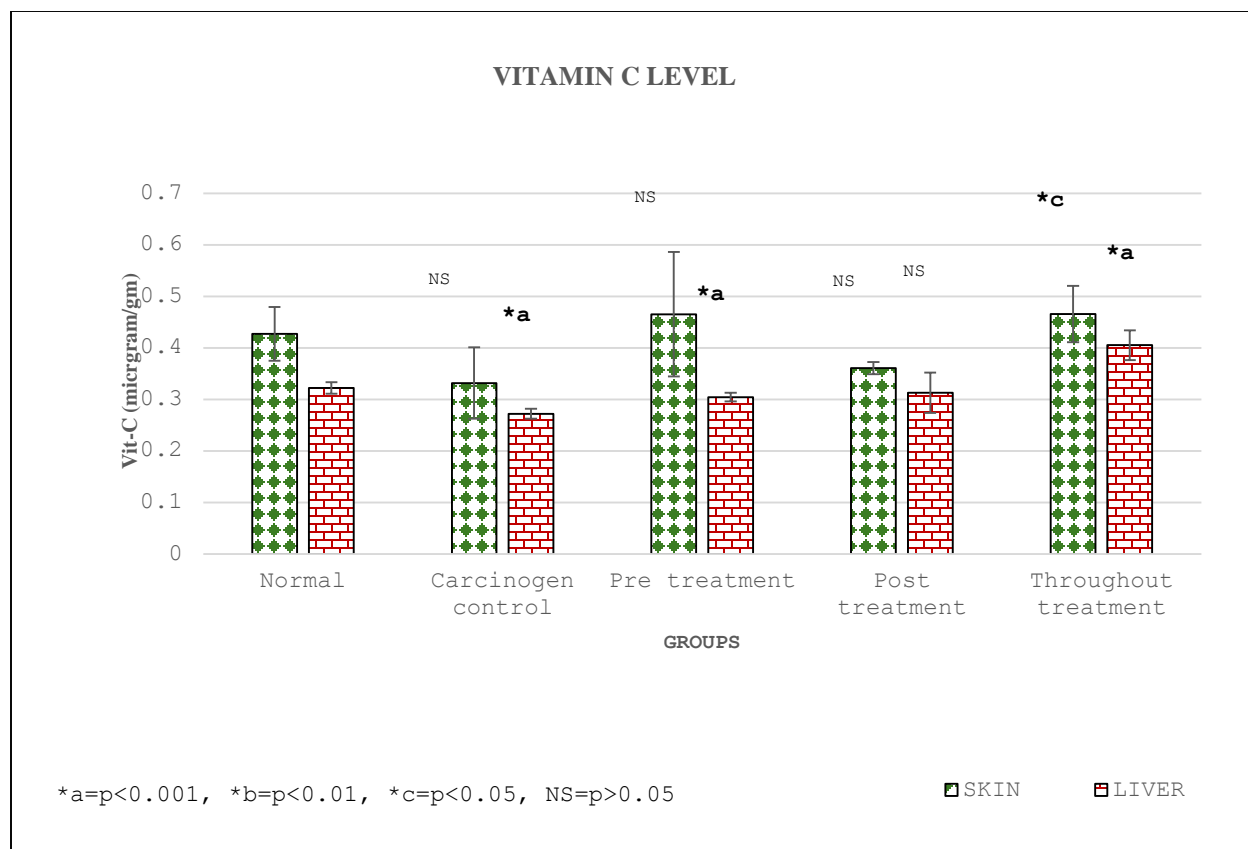

Supplementary Figure 3: Modulations in the catalase content in the skin and liver of mice after CPSE treatment compared to control group.

Supplementary Figure 4: Modulations in the SOD (superoxide dismutase) content in the skin and liver of mice after CPSE treatment compared to control group.

Supplementary Figure 5: Modulations in the total protein content in the skin and liver of mice after CPSE treatment compared to control group.

Supplementary Figure 6: Modulations in the Vitamin C content in the skin and liver of mice after CPSE treatment compared to control group.
